

Explanation & Interpretation of the February 2026 Rules – Annex to the Rules

Smart Home League – LiteView · Age categories: **U14 & U19** · Competition-style map released for full team preparation

This document is an **explanation and interpretation of the previously published February 2026 rules** and serves as an **annex to those rules** – no new rules have been added. Alongside it, a **competition-style practice map (test field)** has been released so that every team can train and be fully prepared.

1 Start Point Rule – U14 & U19

The robot may start from **anywhere on the field**. The start point is chosen by **a single, completely random draw held at the beginning of the round**, and the **same point applies to all teams**.

Explanation: The **entire map** is a potential starting area – **the robot's start point can be anywhere on the field** – so teams must be prepared to start from any location on the map. Because the draw takes place only **once, at the beginning of the round**, and applies to everyone, **all teams start from the same randomly selected point**, keeping the round fair for every team.

2 Map – U14 & U19

A **LiteView map** will be provided to all participants.

Structure of the `simulation-liteview` package: the `worlds` folder contains two files, `U14-liteview` and `U19-liteview` – each team must select the file that belongs to **its own league**. The `worlds-pictures` folder contains the pictures for both categories:

```
simulation-liteview/
├── worlds/
│   ├── U14-liteview      ← file for U14
│   └── U19-liteview      ← file for U19
└── worlds-pictures/
    ├── liteview-U14
    ├── liteview-U19
    ├── grid-U14
    └── grid-U19
```

The pictures shown below as an example belong to the **U19** category:

File	Description
<code>liteview-U19.png</code>	Top view of the LiteView world with the 5×5 grid and cell coordinates (0,0 ... 4,4). Cells containing obstacles are highlighted in red.
<code>grid-U19.png</code>	Schematic map of the same grid, showing what each cell contains (bed, sofa, desk, object, wall, obstacle).

🚧 **About the obstacles:** The cells highlighted in red mark the locations of the obstacles. These obstacles **can be anything** – a wall, a sofa, or similar objects. They are **not present** in the map given to the students, but they **will be present** in the map used at the actual competition.

⚠️ **Note:** These explanations use **U19** as an example – **exactly the same** rules and explanations apply to **U14**.

Top View of the LiteView Map – Grid & Obstacles

liteview-U19.png

— the red cells show where the obstacles will be located at the competition; any cell of this grid may be selected as the start point.

Schematic Wall & Object Map of the Grid

	0,1 bed WALL	0,2 bed	0,3 bed	0,4 object Obstacle
	1,1 WALL desk	1,2 sofa desk	1,3 desk	1,4 Obstacle object
2,0 Obstacle	2,1 Obstacle	2,2 WALL	2,3 WALL	2,4 WALL
3,0 Obstacle	3,1 Obstacle WALL	3,2 sofa	3,3 sofa	
4,0 desk object	4,1 Obstacle object	4,2 sofa		4,4 sofa

grid-U19.png — what each cell contains: bed, sofa, desk, object, wall, obstacle.

Main Competition Map

The main map is **revealed when the game is run**: during the competition, the program is **executed on this map**, and students can work with the **data received from it**. The obstacles marked in red on the LiteView map are present in this map. **This map is not given to the students – it only becomes available to them when the map is released.**
